

ABSTRACT OF THE DISCLOSURE

Paper separator 311 may be equipped with plurality of paper-separating fingers 312 for separating sheet(s) of paper 100 for image formation and abutting and/or backed off from photosensitive body or bodies 310b, paper separator 311 optionally comprising finger body or bodies 313 capable of abutting photosensitive body or bodies; spur(s) 314a capable of touching so as to guide sheet(s) of paper for image formation which has or have separated from photosensitive body or bodies; and/or support component(s) 315 pivotably supporting paper-separating finger(s) 312 so as to impart restoring force(s) thereto urging paper-separating finger(s) 312 to under the force(s) of its or their own weight(s) bring finger body or bodies 313 into abutting engagement with photosensitive body or bodies 310b, and so as to, when spur(s) is or are touching sheet(s) of paper for image formation, cause finger body or bodies 313 to at least partially overcome restoring force(s) produced by weight(s) of paper-separating finger(s) or portion(s) thereof and back off from photosensitive body or bodies 310b.
